

SAINT ANTHONY CATHOLIC SCHOOL

Summer Math and Reading Reinforcement Work 6th Graders entering 7th Grade

Math

Our sixth graders have worked very hard learning new math skills. Review and mastery of all these skills is extremely important in order to maintain a solid math foundation and prepare for the demands of seventh grade math.

Please print the copies attached. Your child will complete the packet and return at the start of school. ALL WORK MUST BE SHOWN TO RECEIVE FULL CREDIT. After completion, students should self-check their answers in a different colored ink with the provided answer key.

If your child has difficulty in any area, any additional support you give them is beneficial. There is a list of websites below for your convenience.

www.freckle.com You will need to sign your child up. This site adapts to students' skills. Adaptive math and fact practice are both good places to start.

www.mathisfun.com Select numbers then Math Trainer for fractions or select games and pick a game to play on the homescreen.

www.funbrain.com Choose any of the games for 6th grade students.

Reading

St. Anthony Catholic School believes that summer reading is a valuable experience for all students and an important extension of our educational programs.

Therefore, students entering 7th grade are asked to read a fiction and non-fiction novel. Students will read the books and take an AR test (AR will remain opened to all students for the entirety of the summer). The Renaissance AR website is <https://global-zone05.renaissance-go.com/welcomeportal/65363>. Your child was asked to record his/her login information at the end of the school year.

Students should be reading in the MG (middle grade) or UG (upper grade) levels.

Grading: The grades your student earns on the AR quizzes for the books read will be entered as classwork grades in Literature for the first quarter. Incomplete summer reading assignments will earn a 50% in the gradebook.
